SPM 2011 ADDITIONAL MATHEMATICS [Termasuk U1, U2] AP SUHARI RESEARCH PAMPERANInterventional Procedures for Symptomatic Intracranial Arteriovenous Malformations: What Is the Evidence? The indications for interventional neuroradiology (INR) treatment of symptomatic intracranial arteriovenous malformations (AVMs) have increased in recent years. To summarize the available evidence on INR procedures for symptomatic AVMs and to compare it with previous meta-analyses. PubMed searches were performed in May 2014. Search terms used were "intracranial arteriovenous malformation," "arteriovenous malformation," "balloon-expandable," "endovascular," "intervention," "gamma knife," and "radiosurgery." A review of articles published from January 1995 to May 2014 was conducted. Inclusion criteria were original articles reporting on INR techniques for treatment of symptomatic AVMs, prospective or retrospective studies, technical reports, case reports, and small case series. The inclusion criteria were evaluated and articles were excluded when they did not meet the inclusion criteria. Articles were assessed on reporting quality using the Reporting Recommendations for Tumor Marker Prognostic Studies (REMARK) guidelines and on the quality of evidence using the methodologic index for nonrandomized studies of the Health Technology Assessment published by the National Institute for Health and Care Excellence (N 82157476af
